

Fibes is in evolution and revolution

We are building a future that will revolutionize business and culture in Seville.

Fibes is always ON

expansion

Seville is currently the third urban destination in Spain and is becoming a more appealing alternative within the national and the international markets day by day. As one of the city's main culture and business entities, FIBES is evolving so as to continue providing responses which live up to these circumstances.

Throughout its 20 years of existence, Fibes has proven its ability to organize and set up all sorts of events on countless occasions: congresses, conventions and fairs, from the simplest to the most complex. Thanks to this, the most important national and international companies have trusted Fibes.

Nowadays, the city's growth and, the increase in FIBES' activity have made it clear that the current size and layout of the venue needs to be enlarged, requiring the construction of facilities with enough capacity to host mainly congresses of larger dimension. Nevertheless, due to the building's characteristics, trade fairs of a notably professional nature may also be held in the center, as well as musical performances and shows.

The new Conference Center will provide responses to the technical and organizational demands created by all types of gatherings, because there will be a high capacity auditorium, as well as large, wide-open spaces that will allow social interaction, excellent lighting and the latest technological advancements, in addition to other features.

Fibes' extension is a project of great relevance which will very much enlarge its offer, while ensuring the success of any event that is held within its facilities, regardless of their magnitude. Likewise, it will provide significant support for the city's economic development, by providing Seville with a new urban space for meeting and sharing knowledge.

This new space will revolutionize business and culture in Seville, while demonstrating once again that Fibes is always ON.

NEW AUDITORIUM

The building consists of three main sections:

SECTION A

Catwalk/ramp, which connects the new building to the current Exhibition and Conference Centre of Seville (FIBES), being its main use for exhibitions and gaining access to the rest of the building.

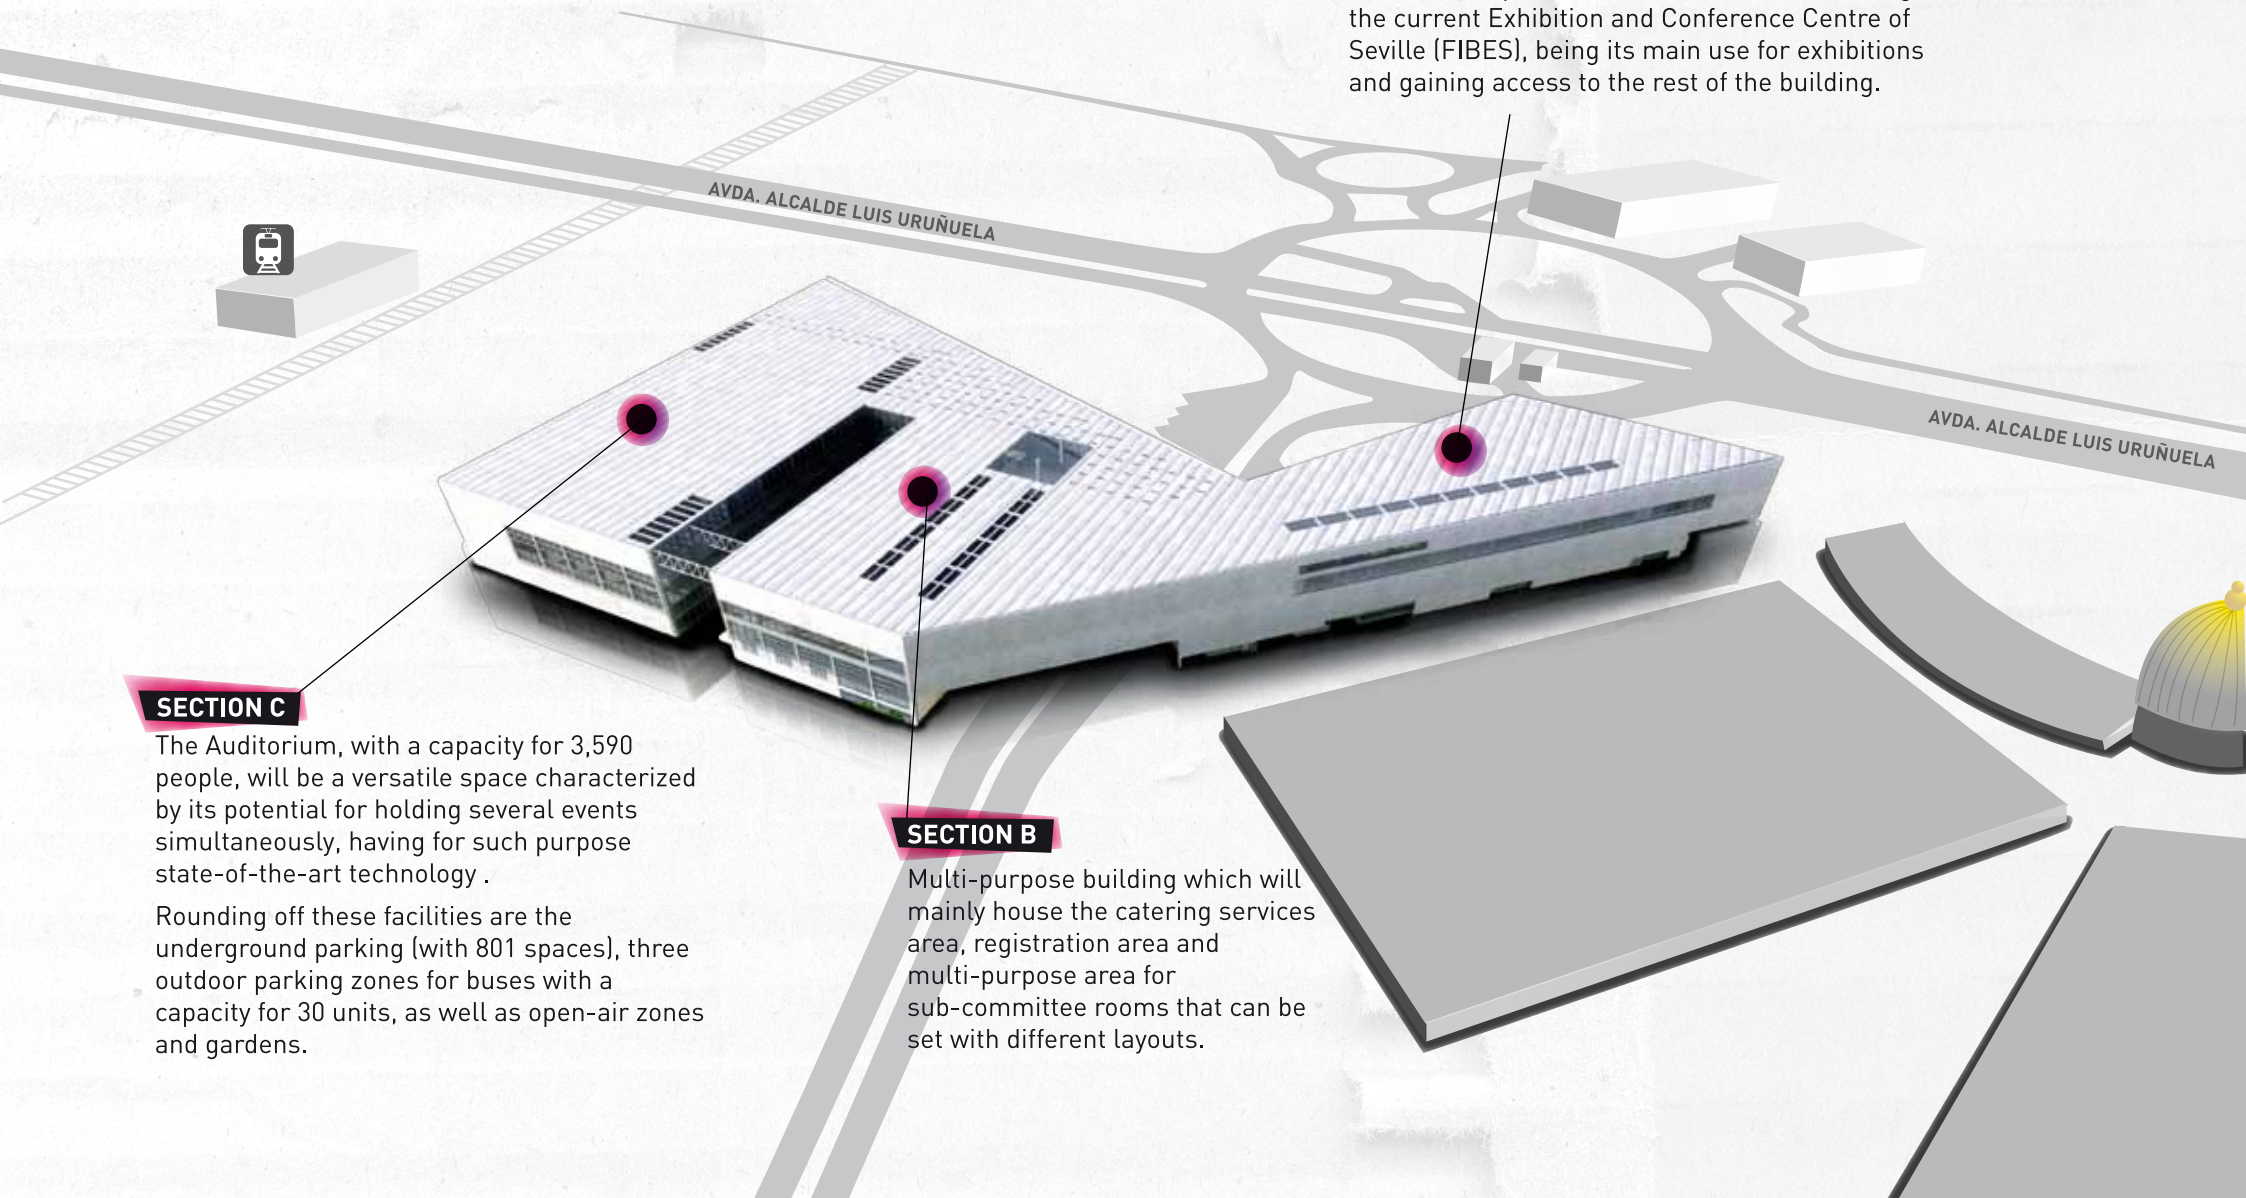

SECTION C

The Auditorium, with a capacity for 3,590 people, will be a versatile space characterized by its potential for holding several events simultaneously, having for such purpose state-of-the-art technology .

Rounding off these facilities are the underground parking (with 801 spaces), three outdoor parking zones for buses with a capacity for 30 units, as well as open-air zones and gardens.

SECTION B

Multi-purpose building which will mainly house the catering services area, registration area and multi-purpose area for sub-committee rooms that can be set with different layouts.

SECTION A - CATWALK/RAMP

This section is the connection area between the current building of FIBES and the new auditorium. Its total floor area is approximately 3.000 m², of which 1.375 m² are for the access ramp, the remaining portion being used for exhibition areas.

The ramp has a covering with the same surface area, suspended at a height of 18 m.

We have distinguished 2 main areas:

Outdoor exhibition area: 883 m²

These 883 m² are divided into different levels, creating a layout with 3 types of outdoor platforms which are ideal for exhibitions.

Indoor exhibition area: 770 m²

These 770 m² are distributed into different levels, creating a large exhibition area, reaching the highest level at 11 m.

SECTION B - MULTI-PURPOSE BUILDING

This second area has 3 floors and basic spaces:

Catering area: 2.538 m²

Catering area is divided into:

- main catering area: 1.812 m² • extended catering area: 391 m² • outdoor terrace area: 335 m²

Registration area: 3.200 m²

The registration area is the main access to the building and is distributed in the following manner:

- information area: 232 m² • entrance hall: 461 m² • exhibition hall: 2.510 m² • 5 offices (23m² y 35m²) • cloakroom: 62 m² • surveillance: 41m²
- restrooms • covered terrace: 1.230 m²

Multi-purpose Rooms: 956 m² and offices

Equipped with mobile wall partitions that make it possible to create different layouts, this area can be left wide-open by hiding the mobile panels. It is equipped with lighting, a loudspeaker system, voice and data system, etc.

SECTION C - AUDITORIUM

Layout

The auditorium was designed as a space capable of housing different layouts and activities, and it is equipped with all the necessary systems. The floorplan shows a trapezoidal layout with capacity for 2000 people.

The upper part of the auditorium has capacity for 1,000 people. Using a mobile enclosure system, it can be sub-divided into 2 rooms, each of them with a capacity for approximately 500 people, or one room with a capacity for approximately 1,000. This system therefore makes it possible to hold up to 3 meetings all at the same time.

The graded seats at the sides will make room for a further 230 people, and in the case of maximum occupancy, the capacity will be increased in 360 people, located at the corners of the broad stage in the room, amounting to a total of 3,590 people.

In this way, the full range of potential layouts is possible: 500, 1,000, 2,000, 3,000 or 3,590 people.

Stage

The stage of the auditorium is made of wood and equipped with technical flooring. It has a surface area of 670 m² as well as a stage front measuring 23 meters, which will open up a full range of possibilities, not only for conferences, but also for the world of musical performances and shows.

The energy efficiency played a very important roll in the design of the building, combining a series of measures such as choosing proper directional orientations, reusing natural resources (water, light, air, etc.), having solar and photovoltaic facilities, enabling to reduce energy demand, and making the operation of the building much more sustainable.
